

Multi Step Equation Practice 2

Date _____ Period _____

Solve each Multi Step equation.

1) $-3v + 7 + 5 = -6$

2) $0 = 5n + 7n$

3) $1 = -4 + 8b - 3b$

4) $2n - 4 - 3n = 0$

5) $7(p + 5) + 3p = 105$

6) $95 = -5(-5 + 2x)$

7) $90 = 6(x + 8)$

8) $24 = 8(1 - 2p) + 4(-7p + 4)$

Solve each TWO STEP equation.

9) $7 + \frac{k}{10} = 8$

10) $29 = 9 + 5n$

Write an equation to solve the word problems.

- 11) Laura has a part time job. She worked 6 hours on Friday and 8 hours on Saturday. She also made \$30 for babysitting her brother Saturday night. If Laura made \$156, how much does she get paid per hour?

Equation _____

Answer _____

- 12) Jonah wanted to have a pizza party for his birthday. He had to pay \$75 to rent the room plus \$8 per person(p). write an equation representin his cost (c).

Equation _____

If Jonah's cost was \$147, how many people did he invite?

Answer _____

Multi Step Equation Practice 2 — Answer Key

1. 6

2. 0

3. 1

4. -4

5. 7

6. -7

7. 7

8. 0

9. 10

10. 4

11. $14x + 30 = 156$; 9

12. $c = 8p + 75$; 9
