

Assignment

Date _____ Period _____

Solve each equation.

1) $80 = 8 + 6x$

2) $-9 = -7 + \frac{v}{3}$

3) $-9 + \frac{x}{6} = -8$

4) $7 + 10x = -163$

5) $-9 = \frac{v}{18} - 10$

6) $11.33 = -2.3 + 4.7k$

7) $5.1x + 0.9 = 29.97$

8) $24 = -\frac{1}{2}x + 18$

9) $7 = \frac{2+n}{3}$

10) $-146 = 6 + 8m$

- 11) Carol is wanting to join a gym. She has to pay a fee of \$50 plus \$2 each visit (v). Write an equation representing her total cost (c).

If Carol paid \$78, how many times did she visit?

Solve each equation by adding, subtraction, multiplying or dividing.

12) $x - 1 = -5$

13) $-182 = -13b$

14) $-12 = -6r$

15) $-21.3 = -15.9 + n$

Two Step Equations — Answer Key

1. 12
2. -6
3. 6
4. -17
5. 18
6. 2.9
7. 5.7
8. -12
9. 19
10. -19
11. $c = 2v + 50$; 14
12. -4
13. 14
14. 2
15. -5.4
